

General Music Workshops

SOUND WAVE RE-ARRANGING

45min.-1 hr.

* These workshops can be for groups up to 75 people, but smaller is better.

I. Using a wireless microphone students' voices are "looped" or recorded

II. These short recordings are played back with both the original & its effected sound.

III. Types of recordings

A. Students collectively sing a few bars of a song they know, & or make up their own words.

B. Students create their own sounds using finger snaps, hand claps, whistles, human beat box, etc.

*This activity fosters creative thinking & stimulates the imagination regardless of musical ability or whether or not they play an instrument.

* If the workshop is not following an assembly, then a piece of music will be played in the beginning of the event, & sound effects & looping will be explained.

* Time permitting some students will be able to try the electric violin.
